

# How to run .py as a script

Step 1. Add the shebang line at the top of your file

```
#!/usr/bin/env python3
```

#above line is a shebang

```
print("hello")
```

Step 2: Give executable permission to the file demo.py by below command

```
chmod +x demo.py
```

Step 3: now you can run it as ./demo.py from terminal
